DETAILED ACTION

Election/Restrictions

1. Applicant's election of claims 1-6 in Paper No. 10/17/03 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 7-10 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 10/17/03.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
4. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites "predetermined temperature". The word "predetermined" is indefinite.

Claim Rejections - 35 USC § 102

(c) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

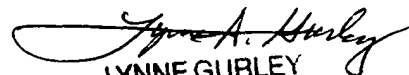

Art Unit: 2812

5. Claims 1-2, 4 and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Charneski et al. (US 6,645,860, dated 11/11/03).
6. Charneski shows the method as claimed in a method of CVD copper metallization in IC applications where a precursor is deposited on a semiconductor substrate and heated so that a pyrolytic decomposition reaction is caused (column 5, lines 45-63).
7. Claims 1, 3 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Lopatin (US 6,368,954, dated 4/9/02, filed 7/28/00).
8. Lopatin shows the method as claimed in a method of ALD copper metallization where a precursor is deposited on a semiconductor substrate and heated. Copper diketonate is used as the precursor (col. 5, lines 63-67; column 6, lines 1-54).
